Phetchaburi Road, Ratchathewi, Bangkok 10400

Summary

Junior Full-Stack Developer with an IT background, building web applications with Next.js, React, TypeScript, Vue, Java, and Supabase, including Stripe payments and a Gemini-powered AI chatbot. Seeking product-focused development where I can deliver reliable, user-friendly features, backed by client-facing experience in turning requirements into solutions. I use Cursor and Claude for coding, debugging, and testing to speed up delivery.

Technical Skills

- **Frontend:** HTML, CSS, JavaScript, TypeScript, React, Next.js, Vue, Tailwind CSS
- **Backend:** Node.js, Express.js, Java, Spring Boot, PostgreSQL, MongoDB, Supabase, Prisma
- **Tools & Other:** Git, GitHub, Stripe, Clerk, JWT, Gemini API, Cursor, Claude

Projects

Neatly Hotel (Team Project) Website | GitHub

- **Description:** Full-stack hotel booking platform with booking cancellation, refunds, date changes, real payment integration, and race-condition-safe booking logic.
- **Feature:** Search & Filter | Booking History | Cancellation & Refund | Change-Date Flow | Security Fix (PostgREST filter-injection)
- **Tech Stack:** Next.js | React | TypeScript | Supabase | Prisma | Stripe | Gemini
- **My Role:**
  - Built search with filters, booking history, and the cancellation/refund and change-date flows
  - Fixed a race condition that caused duplicate Stripe refunds on concurrent cancel requests: claimed the status change atomically before the payment call, with rollback on failure and idempotency keys
  - Fixed a filter-injection flaw in admin booking search (a crafted query returned all 28 bookings) and audited for similar patterns
  - Fixed 3 issues from a security review of booking mutations: a double-booking race (4/5 reproductions → 0/5 using row-level locks), past-date moves, and an unthrottled lookup endpoint (rate limiting)
  - **AI-assisted (mainly Claude, with Cursor): Coding** – implemented the fixes above; **Debugging** – traced race conditions to root cause; **Testing** – reproduced each bug on the live API before and after the fix, and AI-assisted QA test cases

Course Flow (Team Project) Website | GitHub

- **Description:** Online class management platform for schools with role-based access. Admins manage curriculum, assignments, promo codes, and grading; students browse classes and manage subscriptions.
- **Feature:** Assignment Edit & Delete | Promo Code Management | Drag-and-Drop UI | Homework Grading | Class Subscription
- **Tech Stack:** Vue | Java (Spring Boot) | JUnit | Supabase | Clerk
- **My Role:**
  - Built assignment GET/PUT/DELETE endpoints (controller → service → repository) with tests
  - Built admin promo code CRUD with validation, duplicate-code handling, DB migration, and 20 controller/repository tests
  - Fixed the drag-and-drop UI
  - **AI-assisted (mainly Claude, with Cursor): Coding** – wrote endpoint code; **Debugging** – fixed backend–frontend validation errors, a Maven/JDK mismatch, and a stale Vite cache; **Testing** – wrote JUnit tests and test cases

Blog Post Website | GitHub

- **Description:** Full-stack blog platform with JWT authentication, article management, comments, and an admin dashboard, using Supabase for backend and storage.
- **Tech Stack:** React | Vite | Tailwind CSS | Node.js | Express | Supabase | JWT

AskHub API (Backend Skill Checkpoint) GitHub

- **Description:** RESTful Q&A backend where users post, search, update, and delete questions, answer them, and vote on both.
- **Feature:** 11 REST Endpoints | Nested Routing | Search | Voting | Cascading Delete (DB Transactions) | Validation & Error Handling
- **Tech Stack:** Node.js | Express.js | PostgreSQL
- **My Role:** Designed and built all endpoints, validation, and database transactions

Work Experience

Sales Consultant, Advice IT Infinite Public Co., Ltd. (July 2023 – March 2026)

- Provided pre-sales technical consultation to Thai and international customers, translating technical specs into clear recommendations
- Achieved monthly sales exceeding THB 5 million by combining technical expertise with customer needs analysis
- Quickly ramped up on new product lines/technologies to stay ahead in a fast-changing IT retail environment
- Resolved 100+ customer technical issues per month related to PC hardware, peripherals, and software

Education

Full-Stack Software Development Program | TechUp Bootcamp, Thailand (May 2026 - Oct 2026)
Bachelor of Science (Games and Interactive Media) | Bangkok University (June 2019 - Dec 2022)
